

# Project Manual

## Software Requirements

- NodeJs
- MongoDB

## Software Installation

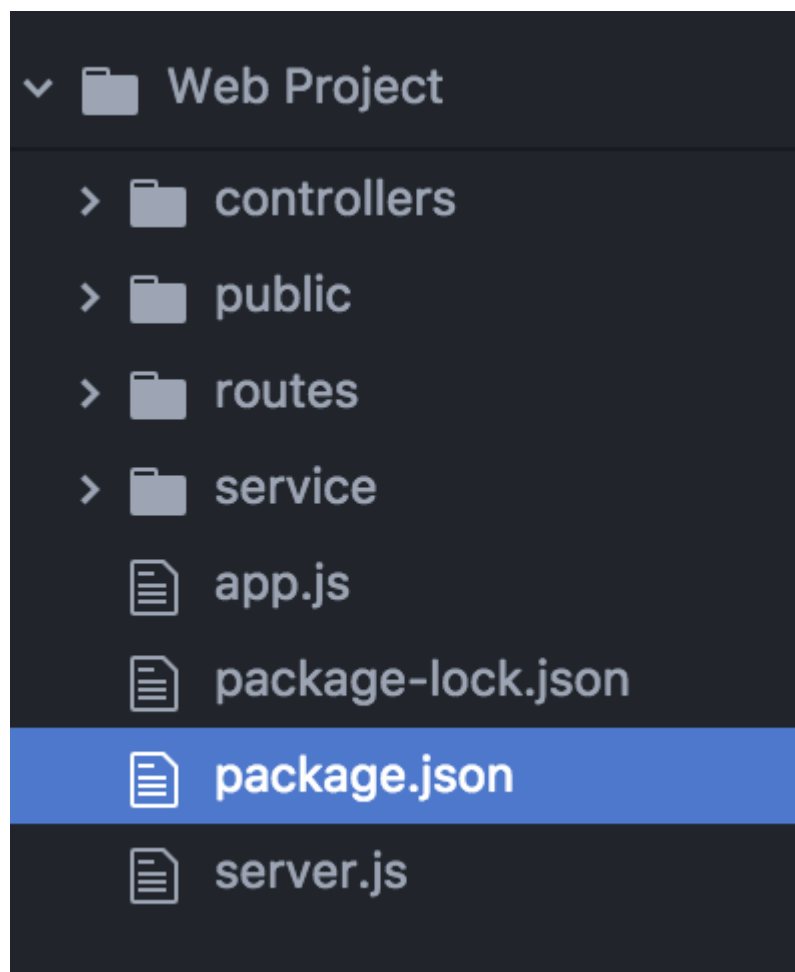

If you already have NodeJs & MongoDB installed & setup, then please skip this step.

Installation:

1. Download & Install NodeJs from the link - <https://nodejs.org/en/download/>
2. Download & Install MongoDB from the link - <https://www.mongodb.com/download-center>
3. Setup Path for MongoDB

## Project Setup

1. Unzip the project Source Code. Project Structure could be same as the below picture.

2. In Package.json file, all the dependencies module for the project are mentioned.
3. Install all the dependencies with the using console/terminal/command prompt where the files are stored. Run the command:

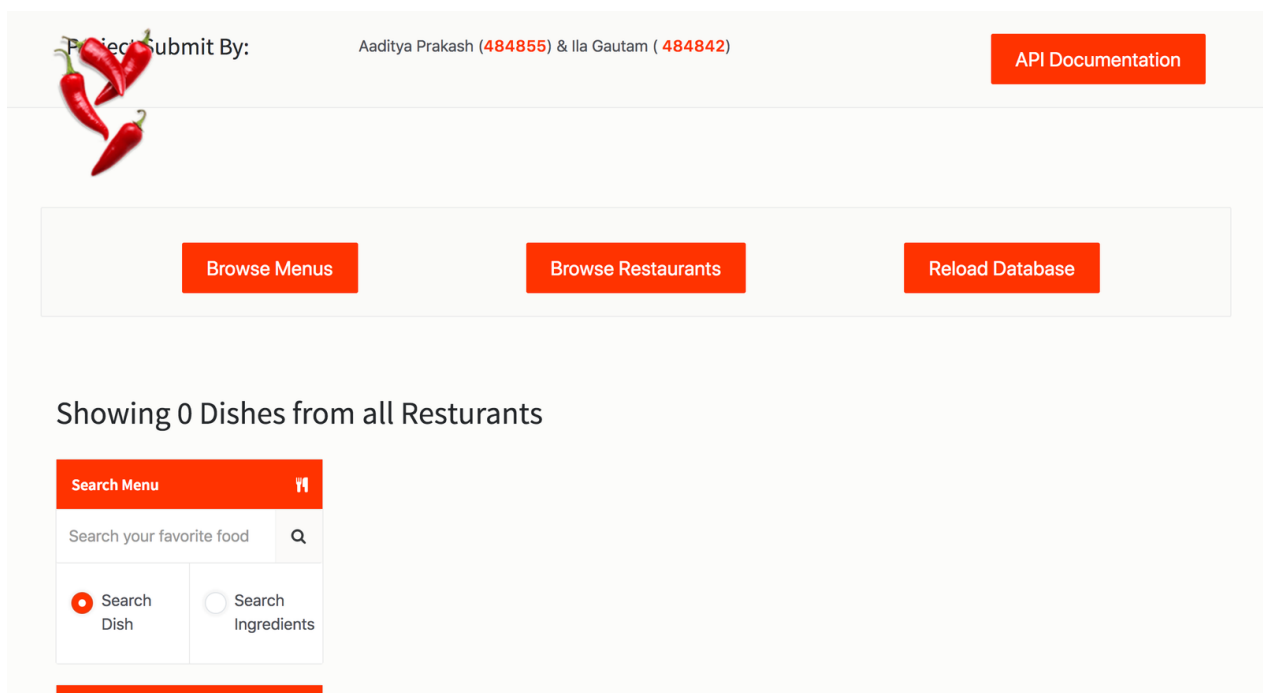

```
npm install
```

4. After successful Installation, Run the command

```
node server
```

This would create & start the local server available at <http://127.0.0.1:3000/>

5. Visit <http://127.0.0.1:3000/>. This will load the static Website with no content

*Static Website*

6. Click on Reload Button to Create Database and Initiate the Web crawling Process.
7. Then Click on Browse Menus and it will display all the dish from the database.
